To Prof. M. A. El-Sayed
Editor The Journal of Physical Chemistry

Dear Prof. El-Sayed,

I would like to contribute an article in your journal in the proposed Richard Bersohn Festschrift issue. I would present an article on either nanoscience/technology or surface wetting and dewetting phenomena.

As a graduate student, I learnt from him the quintessence of Experimental Physical Chemistry research. Whatever I pursue in my research, I feel the influence of teachings of Prof. Bersohn. His simple approach in solving challenging scientific problems guides me in my profession. To me he is a real example of combination of excellence and goodness present in the scientific world.

Sincerely yours,

Arun Chattopadhyay
Associate Professor of Chemistry
