# CHARACTERIZING SELF ASSEMBLED MONOLAYERS USING SCANNING TUNNELING MICROSCOPY

By Robert Conwell

Advisor: Dr. Lloyd Bumm

30 July 2019

# SCANNING TUNNELING MICROSCOPE (STM) FUNDAMENTALS

- Electrons tunnel from atomically sharp tip to flat conductive sample

$$I \propto e^{-kd}$$

- Set point current and negative feedback for constant height
  - Low  $I$ : Tip too far, move forward
  - High  $I$ : Tip too close, move back
- Images surface topography for homogeneous samples

Piezo Actuators

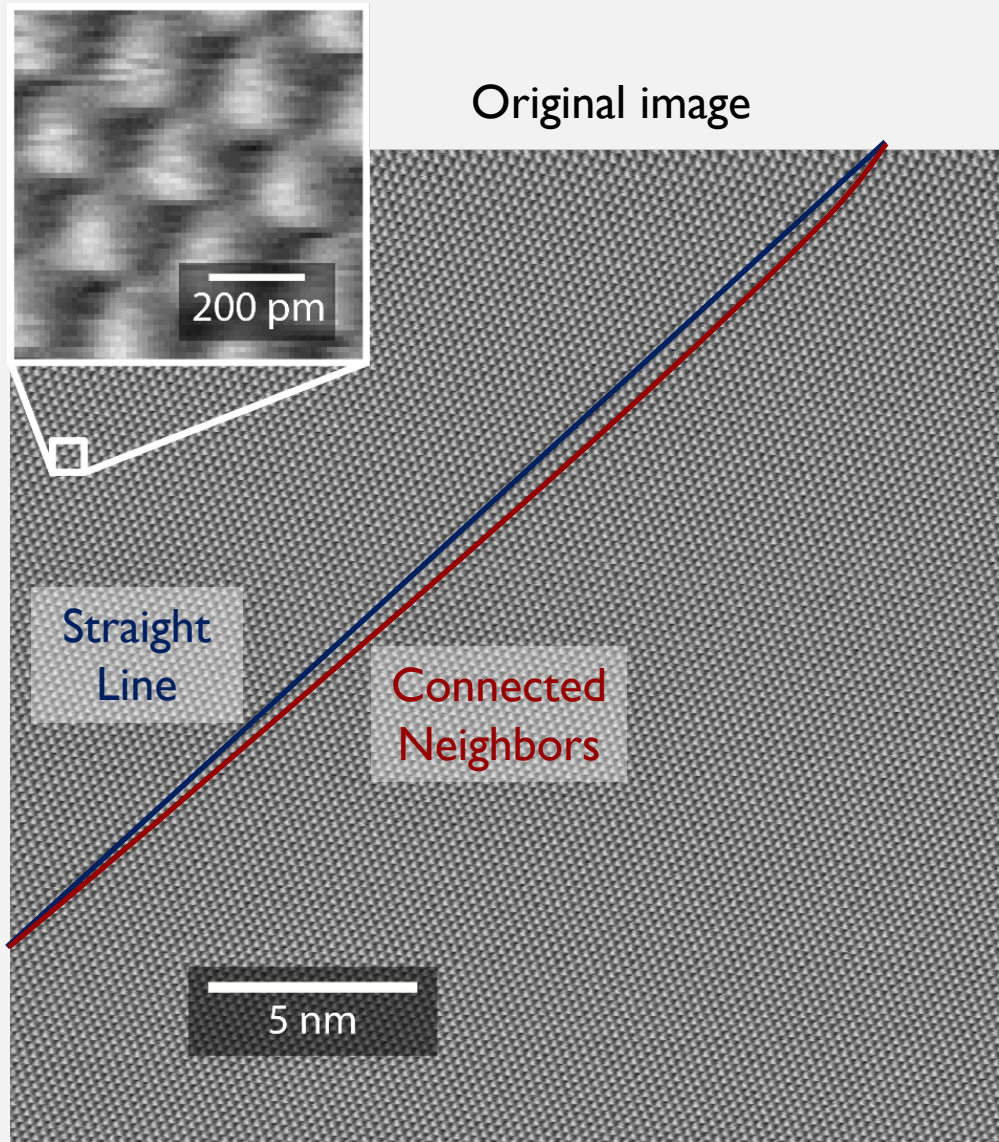

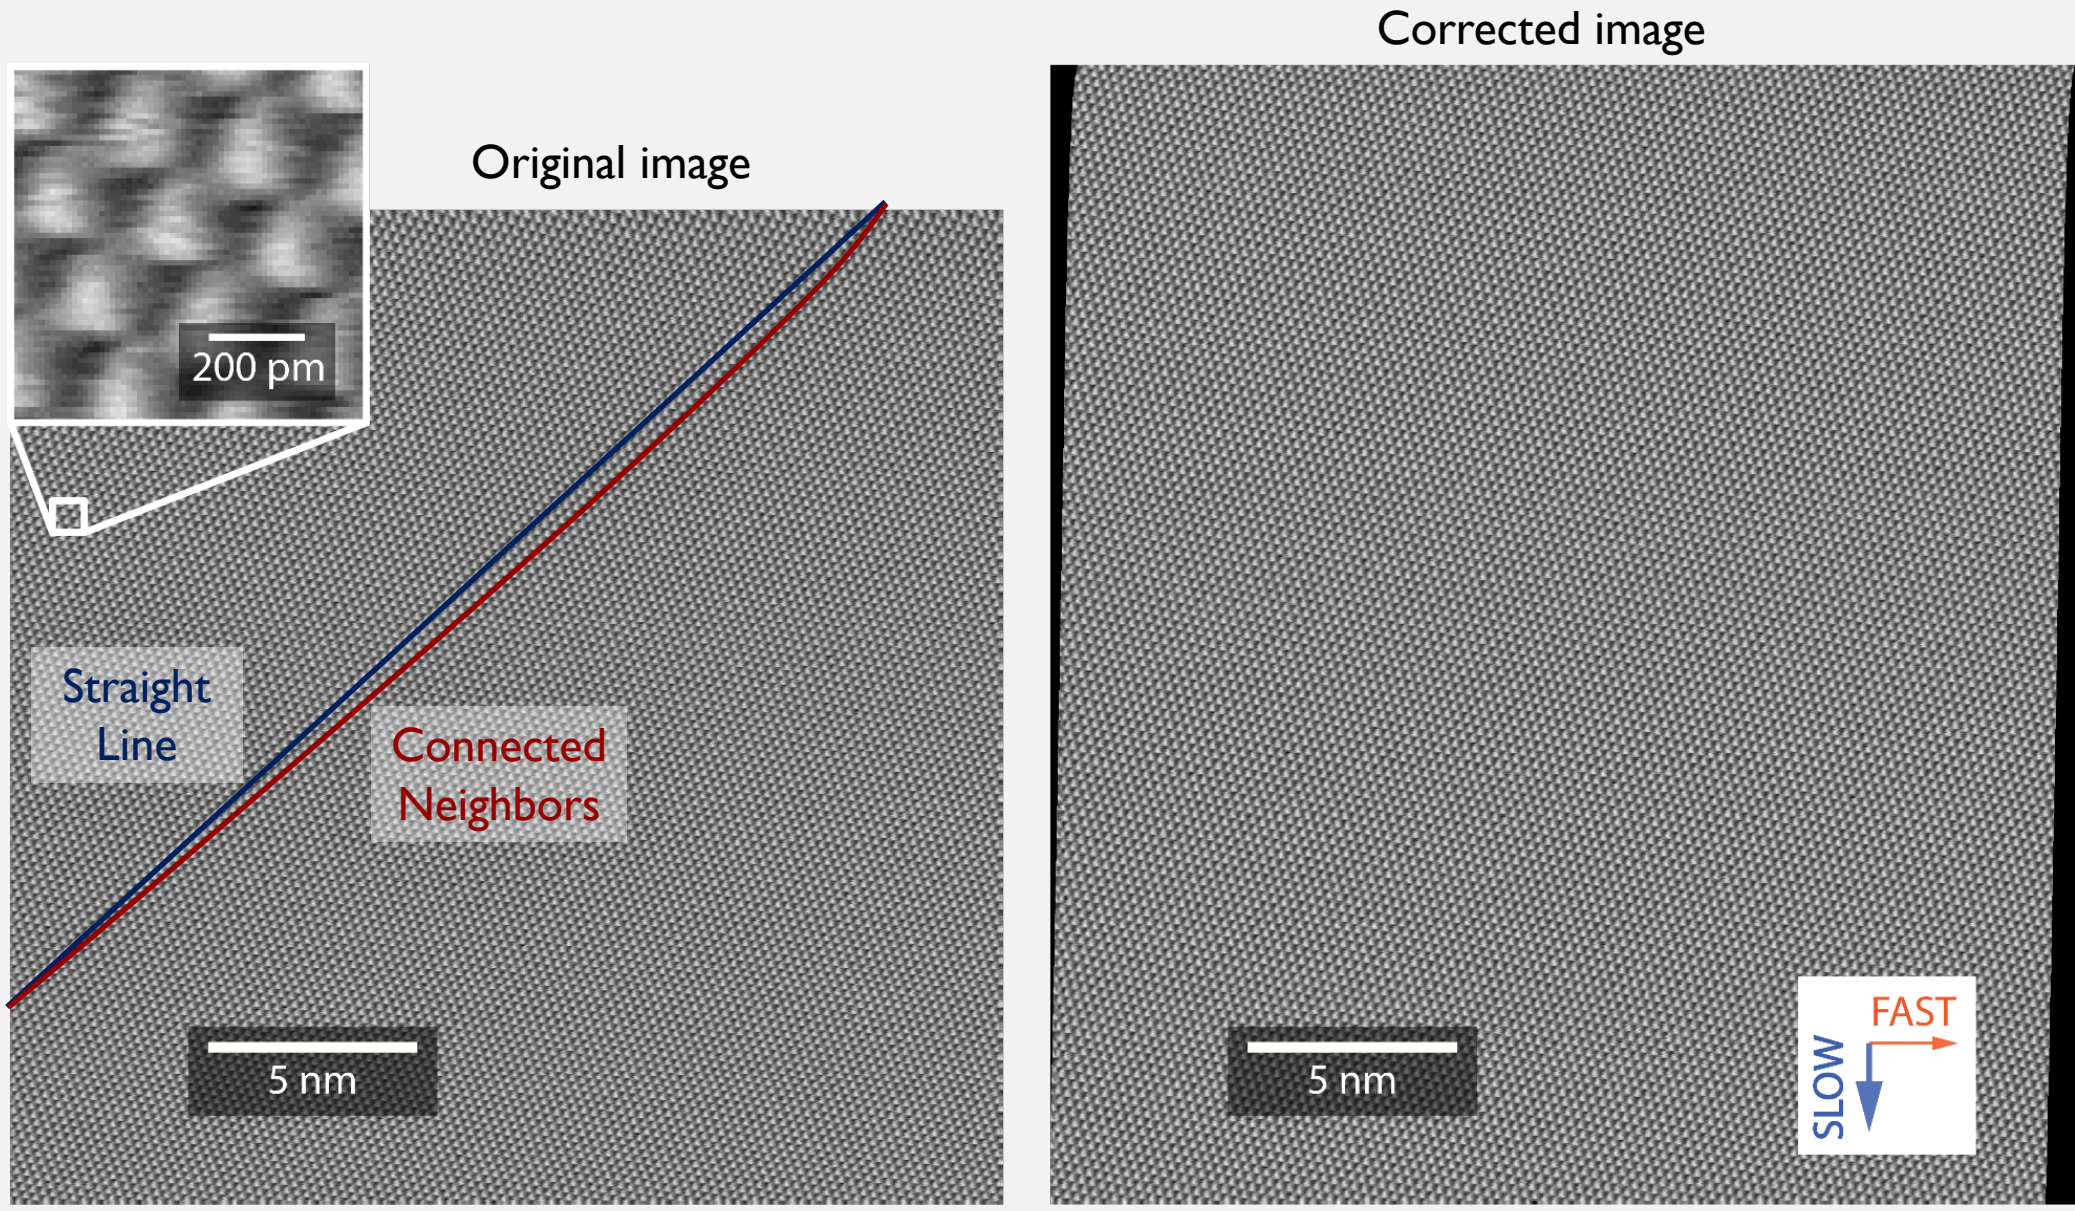

# STM IMAGING EFFECTS

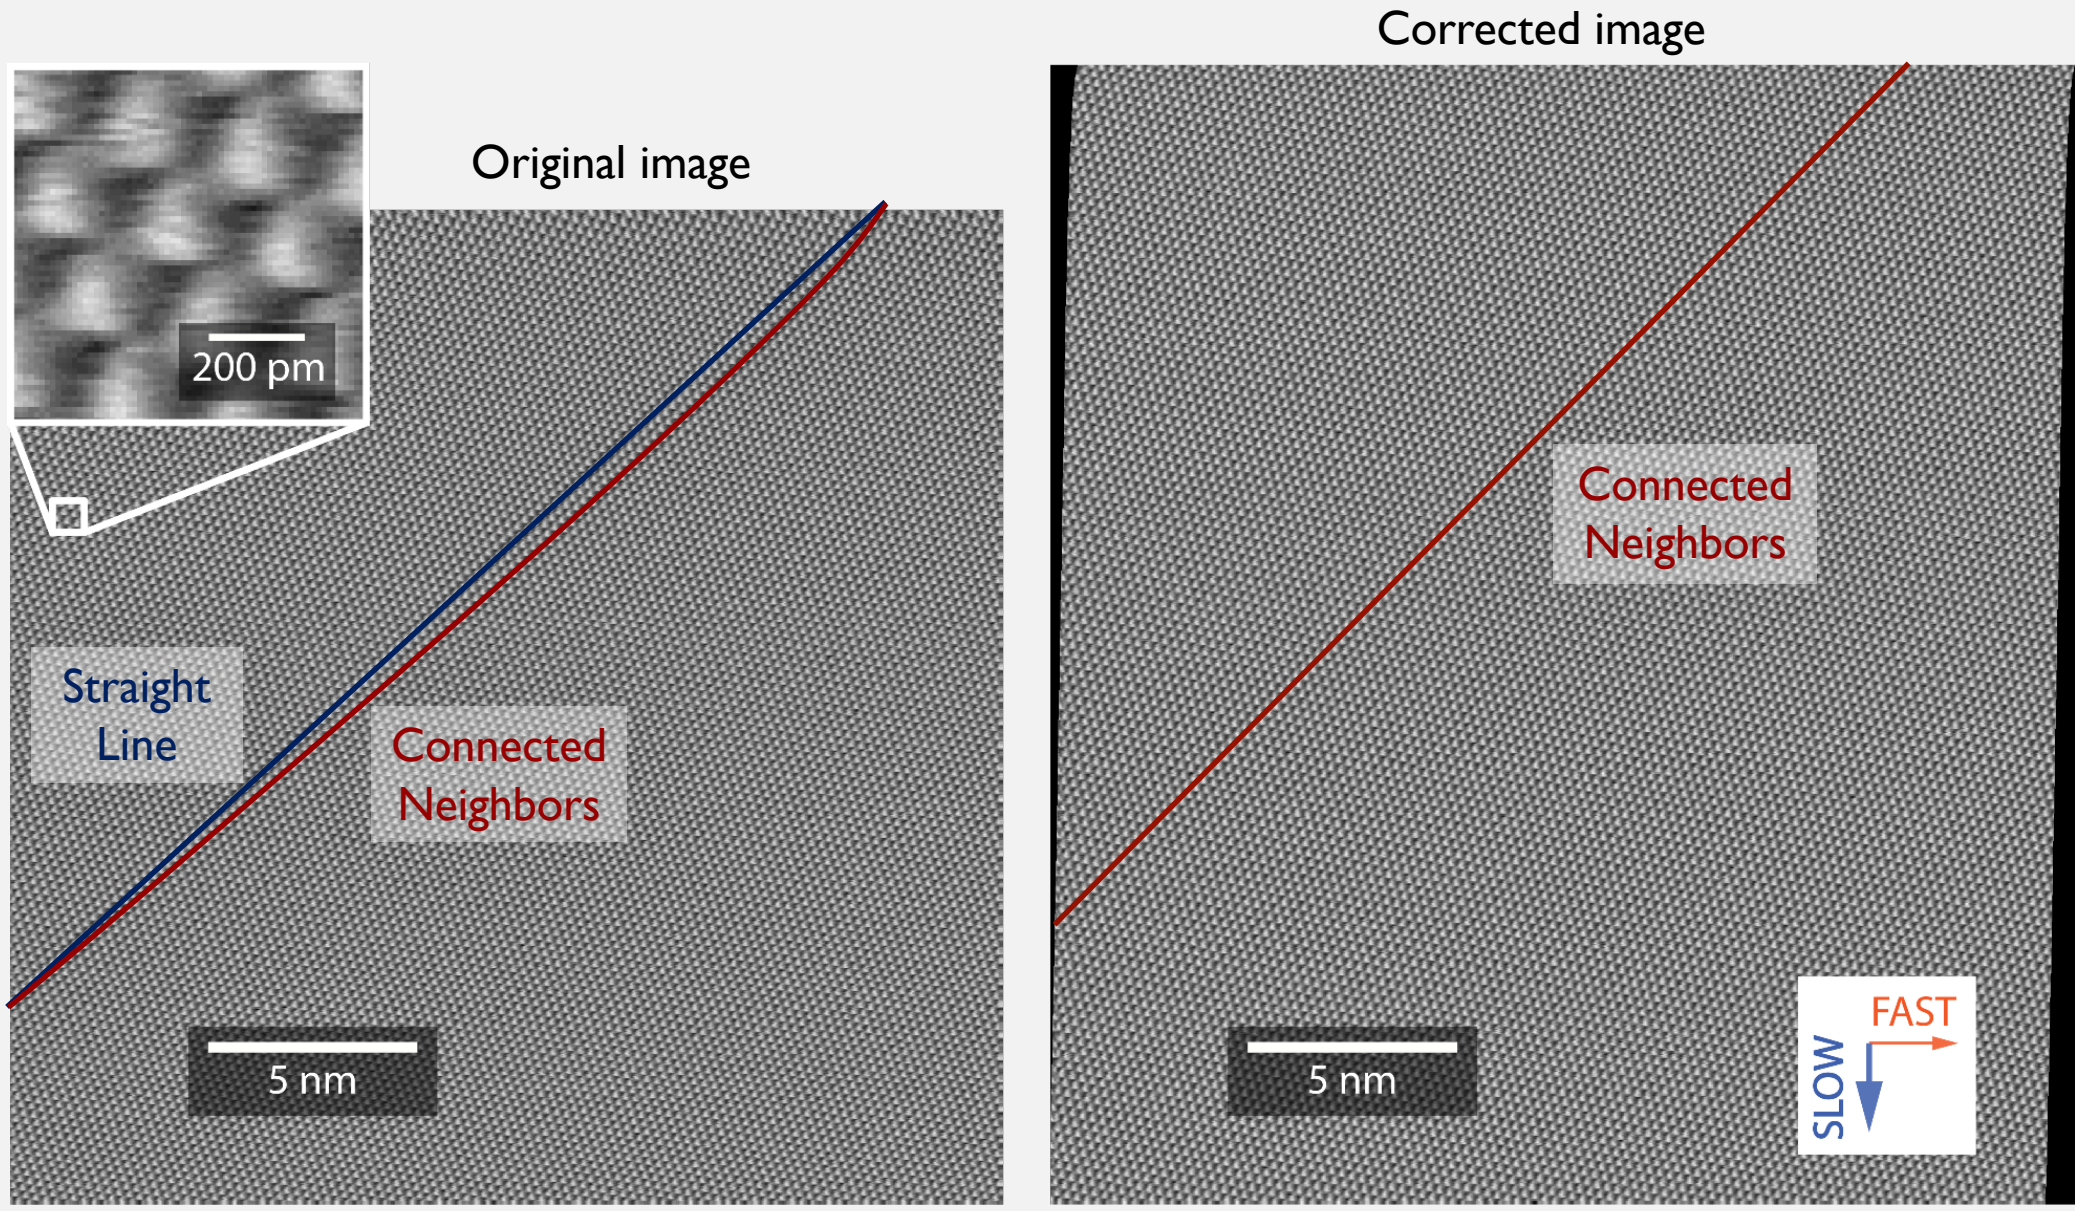

- Various imaging effects which distort the image
  - Drift
  - Hysteresis
  - Creep
- Either image is distorted or SAMs are not a lattice
  - Latter is highly unlikely
- Apply image correction in MATLAB

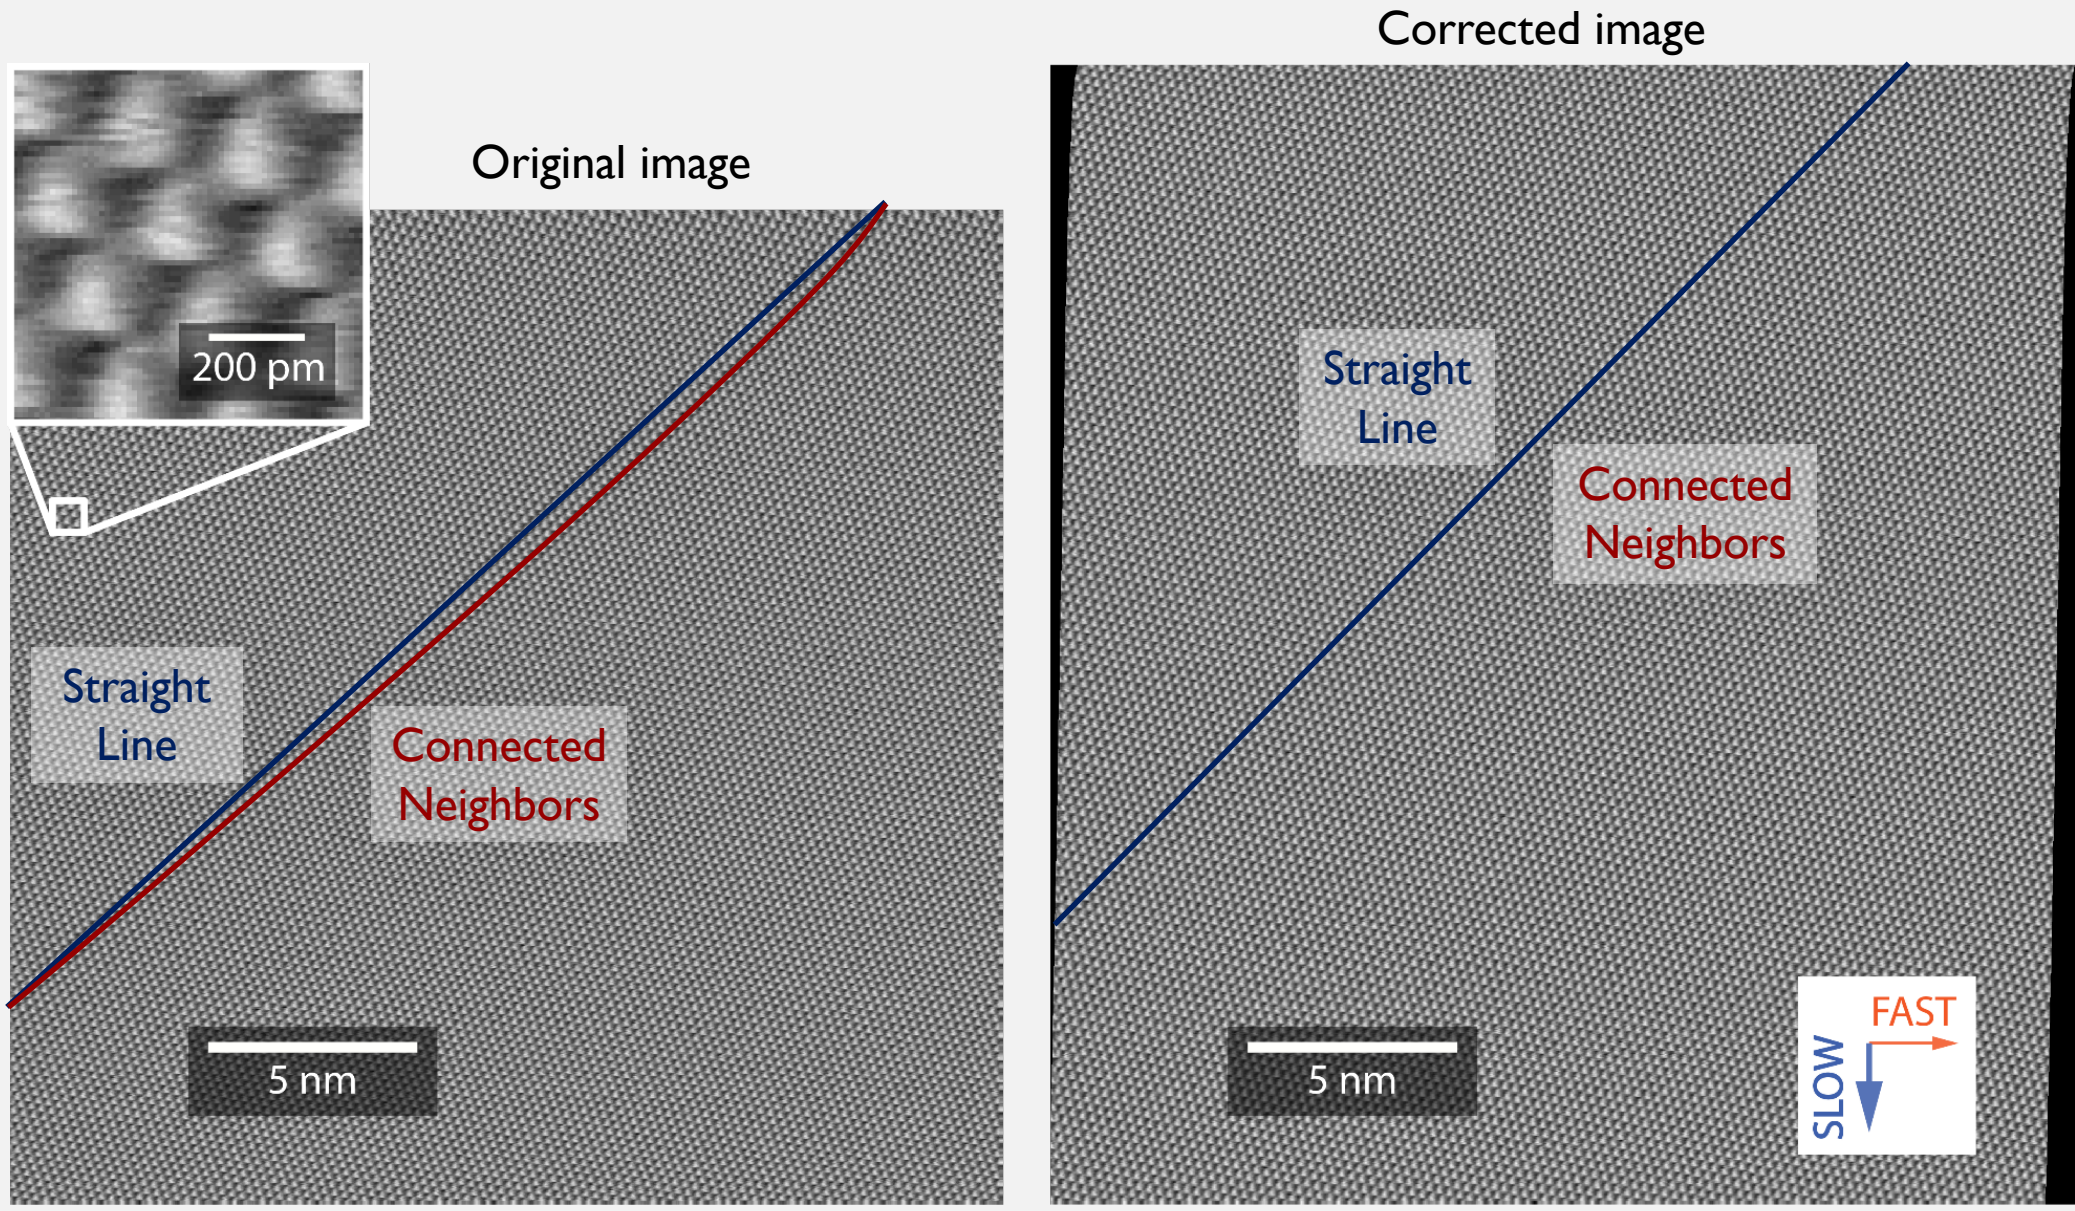

M.P.Yothers, A. E. Browder, and L.A. Bumm, *Rev. Sci. Instrum.* **88** (1), 013708 (2017).

# ALKANETHIOL SELF ASSEMBLED MONOLAYERS (SAMs)

- Alkanethiol – hydrocarbon chain with sulfur at the end
- Self assemble – spontaneously grow 2D crystal from alkanethiol vapor
- Monolayer – Only a molecule thick

Decanethiol – C10

# ALKANETHIOL SELF ASSEMBLED MONOLAYERS (SAMs)

- Alkanethiol SAMs on gold substrate
- Abbreviate name by length of hydrocarbon chain

Name	Abbreviation
Octanethiol	C8
Nonanethiol	C9
Decanethiol	C10
Undecanethiol	C11
Dodecanethiol	C12

C10 Sample 2019 #3  
2019\_06\_17\_0033

# CRYSTAL LATTICE

- Crystal – repeating arrangement of atoms
- Two components
  - Lattice → How to repeat
  - Basis → What is being repeated

- Unit cell → Unit cell is the smallest group of atoms which can be repeated to reconstruct the entire crystal, i.e. contains all information of the crystal

# UNIT CELL & LOCATION CONFIDENCE

- Averaged unit cell image
  - Grayscale
- Ellipses - location confidence
  - Colored by basis site
  - Center – Mean location
  - Inner ellipse  $1\sigma$ , outer  $2\sigma$

# UNIT CELL & LOCATION CONFIDENCE

- Averaged unit cell image
  - Grayscale
- Ellipses - location confidence
  - Colored by basis site
  - Center – Mean location
  - Inner ellipse  $1\sigma$ , outer  $2\sigma$

# ALKANETHIOL CRYSTAL

- All 4 molecule colors are alkanethiol
- Structure is very similar to a one-molecule basis
- How do we compare these structures?

# STRUCTURE FINGERPRINT

- Molecule ends are close to one-molecule basis lattice sites
- Fingerprint plot shows distance from these sites
- Easier to see differences between structures

# STRUCTURE FINGERPRINT

- Molecule ends are close to one-molecule basis lattice sites
- Fingerprint plot shows distance from these sites
- Easier to see differences between structures

# STRUCTURE FINGERPRINT

- Molecule ends are close to one-molecule basis lattice sites
- Fingerprint plot shows distance from these sites
- Easier to see differences between structures

# STRUCTURE FINGERPRINT

- Molecule ends are close to one-molecule basis lattice sites
- Fingerprint plot shows distance from these sites
- Easier to see differences between structures

# MOTIVATION

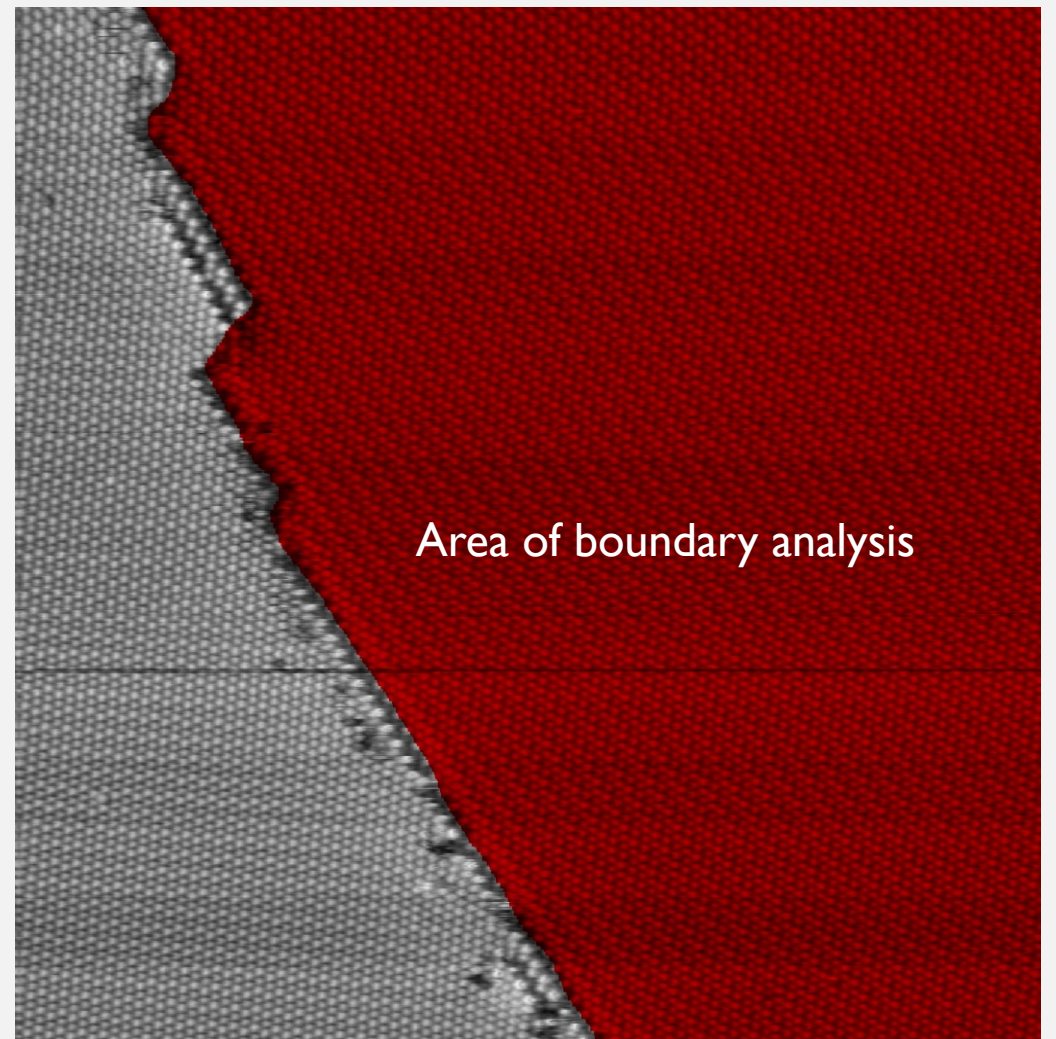

- **Does selecting molecules on/near a boundary skew results?**
  - Close to a boundary, the crystal may be strained
  - Analysis on boundary vs Analysis 5-10 molecules away from boundary
- **Are chains of odd and even length structurally different?**
  - Can we tell odd from even by looking at them?

# MOTIVATION

- Does selecting molecules on/near a boundary skew results?
  - Close to a boundary, the crystal may be strained
  - Analysis on boundary vs Analysis 5-10 molecules away from boundary
- Are chains of odd and even length structurally different?
  - Can we tell odd from even by looking at them?

### On-boundary Analysis

### Offset plots

## BOUNDARY ANALYSIS

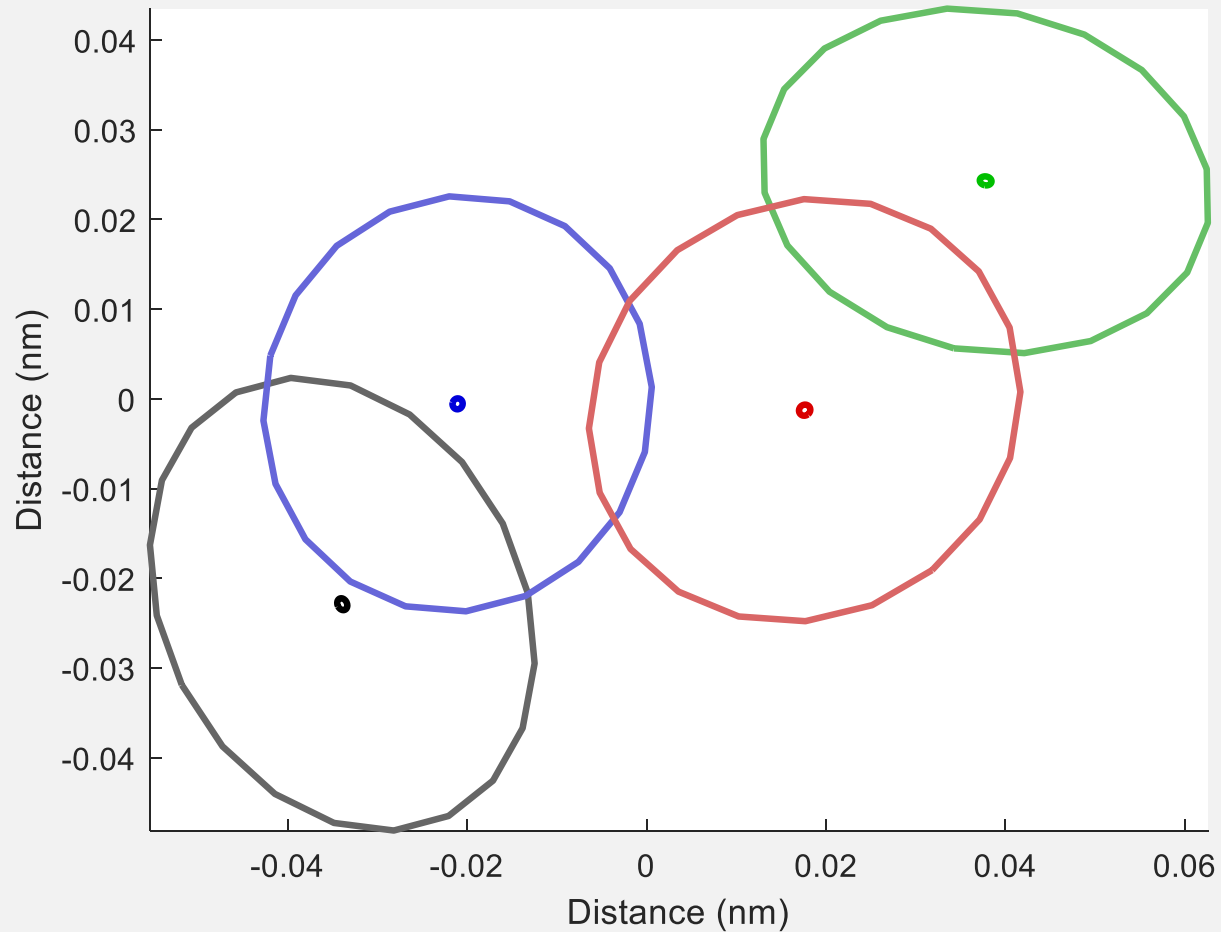

- **Confidence ellipses are larger**
  - Increases the uncertainty
- **Exclude molecules near the edge**

# MOTIVATION

- Does selecting molecules on/near a boundary skew results?
  - Close to a boundary, the crystal may be strained
  - Analysis on boundary vs Analysis 5-10 molecules away from boundary
- **Are chains of odd and even length structurally different?**
  - Can we tell odd from even by looking at them?

# STRUCTURE COMPARISON

## CONCLUSIONS AND FUTURE DIRECTION

- Made Alkanethiol SAM samples and imaged with STM
- Measured effects of proximity when analyzing images with boundaries and found noticeable effect
- Compared fingerprints of odd and even chain length SAMs and did not find a difference
