

# Laser Safety

- Never look directly into the laser beam.
- Only point the beam into the sky.
- Never point a laser beam in the direction of any person, vehicle, aircraft, or wildlife.
- Avoid using laser pointers near an airport or airport runway approach.
- To be on the safe side don't aim the beam directly at a star. It is better to circle around it because an aircraft can look a star when it is far away.
- Do not aim the laser beam at a reflective surface as the reflection might inadvertently strike an individual.
- Do not allow **any** event participants to use an LS laser. Only event hosts are allowed to operate our lasers.
